PROFILE

Computer Science and Engineering (AI & ML) graduate with strong skills in **Python**, **Machine Learning**, and **Backend Development**. A quick learner and problem solver, passionate about applying technology to solve real-world problems by building scalable, efficient, and user-friendly solutions.

TECHNICAL SKILLS

Languages — Python, JavaScript

Backend Technologies: — FastAPI, Django, JWT

Frontend — React.JS, CSS

Databases: — PostgreSQL

Tools — Git, GitHub, Docker

PROFESSIONAL EXPERIENCE

Software Engineer Intern

05/2026 – Present

QuanHack 🌐

- Contributed to the development of an enterprise-grade OKR management system utilizing **FastAPI**, **MongoDB**
- Assisted in the implementation of an AI Agent Subsystem powered by **Google Gemini** and **LangChain**, facilitating features like SMART Key Result generation and dynamic capability building.
- Worked with containerization and serverless deployment strategies utilizing **Docker** to maintain consistent development and production environments.

PROJECTS

IoT Based Real time Air Pollution Monitoring System with Machine Learning

12/2025 – 05/2026

Major Project done at 4th year

- Designed and implemented a real-time pollution monitoring system integrating Arduino-based gas sensors (MQ135, MQ7, DHT22) with a Flask/Python backend and Flutter mobile application.
- Applied Random Forest classification for air quality prediction with 92.14% accuracy.
- Developed live AQI visualization, location-based monitoring, and alert features for users.

AI Driven Disease Prediction and Doctor Consultancy System 🌐

Mini Project done at 3rd year

- Built an AI-powered healthcare web application using **Django** as the backend for disease prediction based on user-reported symptoms.
- Integrated **Google GenAI (Gemini)** to generate accurate, real-time health insights.
- Implemented a doctor consultancy and appointment booking system with secure patient data management.

E-Commerce Web Application (Personal Project)

11/2025

- Developed a Django-based E-commerce web application with responsive UI using Bootstrap.
- Implemented product listing with search, pagination, and dynamic cart features (add, increment, decrement, remove).
- Built a custom admin panel with full CRUD operations for product management.
- Used SQLite and Django ORM for efficient data handling and session-based cart management.

JOURNAL PUBLICATIONS

A Hybrid IoT and Machine Learning Approach for Real-Time Air Pollution Detection and Prediction

Co-authored an IEEE conference paper proposing a low-cost IoT and ML-based air pollution monitoring system using Arduino sensors, K-Means clustering, Random Forest regression, and a Flutter mobile application for real-time monitoring and prediction, achieving an R^2 score of 0.92.

EDUCATION

Higher Secondary Education

Sree Buddha Central School, CBSE

Percentage : 75

05/2020 – 02/2022

Karunagappally, Kollam

am

High School

Sree Buddha Central School, CBSE

Percentage : 94

04/2019 – 02/2020

Karunagappally, Kollam

am

Bachelor of Technology- Computer Science and Engineering (Artificial Intelligence & Machine Learning)

Sree Buddha College of Engineering

CGPA : 7.4/10

09/2022 – 05/2026

Pattoor, Alappuzha

CERTIFICATES

Full Stack Web Development with AI Tools — under the Next Gen Employability Program

Python for Data Science, AI & Development authorized by IBM — Coursera

The Complete Python Bootcamp From Zero to Hero in Python — by Udemy

APIs, authorized by Meta — Coursera
